WHERE CURIOSITY BECOMES CREATION

INDEX

1. Theme: Energy Conversion – Hit & Drop Challenge
2. Event Description
3. Problem Statement
4. Task Flow
5. Energy Conversion Requirement
6. Team Details
7. Arena Constraints
8. Time Rules
9. Intervention Rules
10. Task Specifications (HIT & FINAL DROP CONDITION)
11. Materials Rules
12. Safety Rules
13. Judging Criteria
14. Penalties
15. Eligibility
16. Example Flow
17. Co-ordinators

1.**Theme: Energy Conversion – Hit & Drop Challenge:** This event focuses on creating complex chain reactions that demonstrate energy transformations to hit and move a bottle.

2.**Event Description:** A contraption involves turning simple tasks into creative, complex chain reactions where teams design systems showing multiple energy conversions with precision and robustness.

3.**Problem Statement:** Participants must design a multi-step contraption that uses various energy conversions to trigger a sequence that eventually hits and displaces a bottle.

4.**Task Flow:** The sequence must start with an initial trigger, followed by energy conversions, hitting the bottle, and finally dropping the bottle at least 1 foot away from its original spot.

5.**Energy Conversion Requirement:** Systems must use at least 3 energy conversions (such as mechanical, electrical, elastic, or magnetic), and each step must automatically trigger the next.

6.**Team Details:** Each team must consist of exactly 4 mandatory participants.

7.**Arena Constraints:** The maximum allowed size for the contraption setup is 2 meters by 4 meters.

8.**Time Rules:** Teams are given a total of 15 minutes and are allowed a maximum of 3 trials.

9.**Intervention Rules:** A maximum of 3 human interventions are permitted; manual interference between steps is not allowed, and extra interventions result in penalties.

10.**Task Specifications (HIT & FINAL DROP CONDITION):** The bottle must be struck by a moving mechanism (no direct hand interaction) and must fall and land with clear displacement of at least 1 feet (≈30 cm).

11.**Materials Rules:** Participants must bring all their own materials; no materials are provided by organizers, no sharing is allowed, and the use of waste materials is encouraged.

12.**Safety Rules:** Designs must be safe and stable, using no hazardous materials, and teams must clean their area after they finish.

13.**Judging Criteria:** Teams are evaluated on the number of steps, energy conversions, innovation, successful hit/drop (mandatory), execution smoothness, robustness, and bonuses for minimal intervention or waste material use.

14.**Penalties:** Deductions are given for manual interventions and failing the 1-feet drop, while unsafe designs result in disqualification.

15.**Eligibility:** The competition is open to all undergraduate (UG) students with a valid ID card.

16.**Example Flow:** A sample sequence includes a raised ball falling (potential to kinetic), hitting a lever (mechanical), releasing a spring (elastic to kinetic), hitting the bottle, and finally throwing the bottle 1 foot away.
